PROJECTION FOR COLLEGES

One of the first pieces of technology to enter and reshape the classroom was the projector. First appearing in the classroom in the 1950s projectors have been a staple piece of technology in every classroom for decades. Over this time, they have evolved in shape, size and capabilities. Students in 2019 don't know a world without laptops and smartphones which is why it is necessary for technology to be incorporated into the classroom. Not only to keep students engaged but to also provide a better learning experience and provide longer retention of information.

Benefits of Using a Projector at College

- Interactive Presentations To Keep Students Engaged
- Makes Better Use of Classroom Time
- Eco-Friendly
- Share Big Ideas on a Big Screen

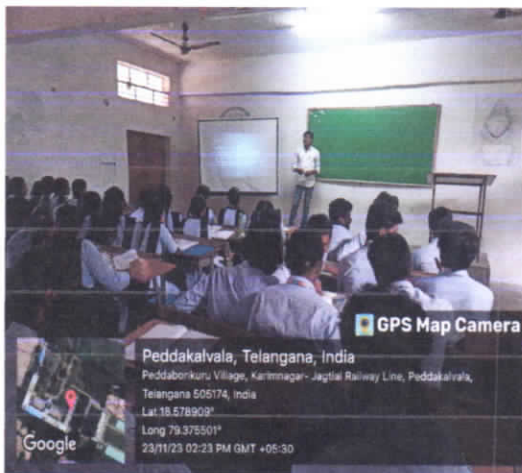

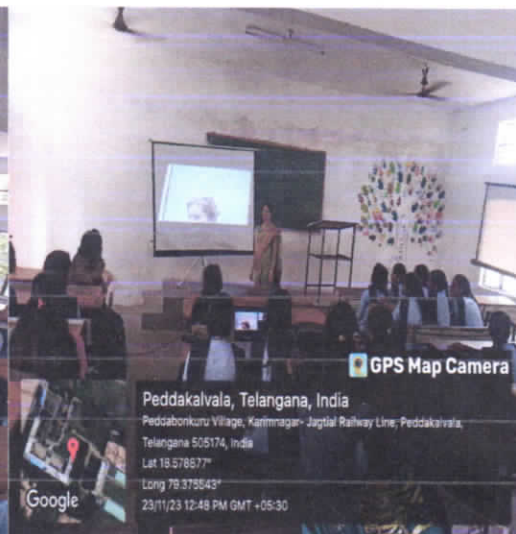

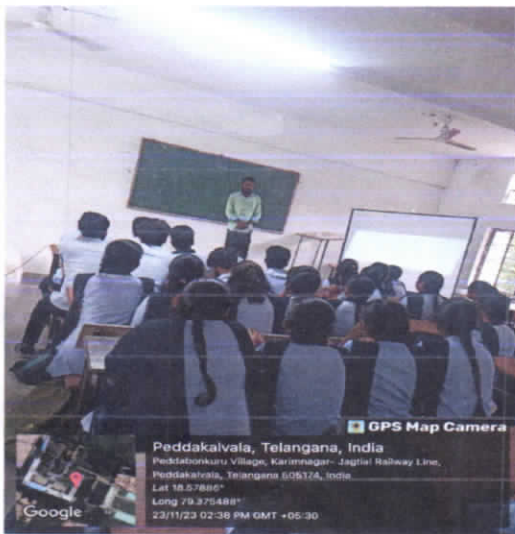

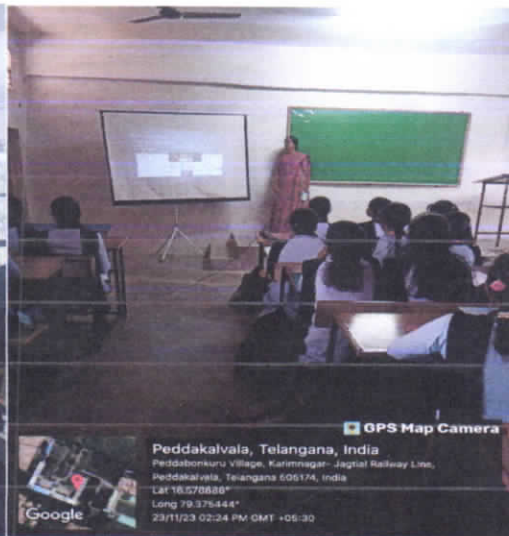

One of the main reasons the projector remains central to education is because of their ever-increasing level of engagement. Projectors can help increase attention and the absorption of information as everyone in the lecture hall can clearly read the content. Larger lecture halls benefit from dual-projection scenarios which add flexibility and allow for more of the class to be involved.

Our college has well equipped ICT enabled classes, smart classroom & seminar halls.
